Company Profile and Services

2015-2016

Profile

Introduction

Located in Jounieh-Lebanon, Netrom Consultants was founded by a team of experts in the fields of Cyber Security, IT audit, business solutions, and networking.

We offer comprehensive end-to-end solutions to enable new revenue streams and achieve strategic and business objectives by utilizing the full capabilities of cutting edge technologies.

Our services include two core activities: IT consultancy services and business analysis, served by an experienced staff in the fields of IT consultancy, audit, security, and business consultancy.

Approach

We act as the top management advisors.

We work in partnership with our clients.

We build our recommendations on solid facts.

We accompany our clients in implementation.

Profile

Beliefs

Commitment to client success.

Adherence to the highest professional standards.

High professional ethics.

Up to date with the latest developments in the IT field.

Building and maintaining our knowledge reservoir.

Mission and Values

Meet rapidly our clients' needs and expectations.

Understand the clients' need and working environment.

IT Solutions which add value to the company's growth and performance.

IT Services in accordance with the latest technological trends.

Trust, confidentiality, and transparency.

Professional service and high ethics.

Services and Solutions

Backup and Disaster Recovery Plan

Disasters happen to anyone and anywhere due to virus attacks or plain old hardware failure.

We recover your servers quickly and efficiently based on server technology and server virtualization technology.

General IT Consultancy

We provide advisory based on analysis and research, conducted to suit clients' instructions.

We review company forms and documents.

We Discuss and interview key staff members in order to develop a request for tender document that details the client's requirements.

We provide general advices related to hardware and software acquisition and implementation.

We select and plan your infrastructure from network components to workstation hardware and operating system software.

Services and Solutions

Networking

We specify, supply, install, and support the necessary network equipment.

We connect offices from different locations via permanent links over broadband.

We provide broadband solutions to speed up your current broadband connection.

Data and Encryption

We help you secure your uploads and downloads over unsecured channels.

We help you send secure e-mails and access remote file systems.

We offer a way of securing your VOIP (voice over IP) calls with unbreakable encryption.

We secure mobile VOIP solutions.

- Disaster recovery plan
- NAS & SAN storage
- DLP and A.V corporate
- Backup software
- Encryption server

Newly Implemented Services

Network Penetration Test

T

What is a “Network Penetration Test”?

The external network security assessment, which is also called external “penetration testing” or external “ethical hacking,” is a process that evaluates and assesses the security posture of the corporate’s Internet presence.

A penetration test determines how well your organization’s security controls protect your assets from a direct Internet attack. In this testing, we try to gain access to your network and information assets in the same way a hacker would. A penetration test is beneficial because it allows you to identify the extent to which your network could be compromised by an external malicious attacker, so that you can strengthen your defenses and prevent a successful attack from occurring. Only a real penetration test by an experienced professional can simulate what would happen if a determined hacker were to attack your organization.

Types of tests/Outcome

Owner / admin DOX

DOS test

Ports scan

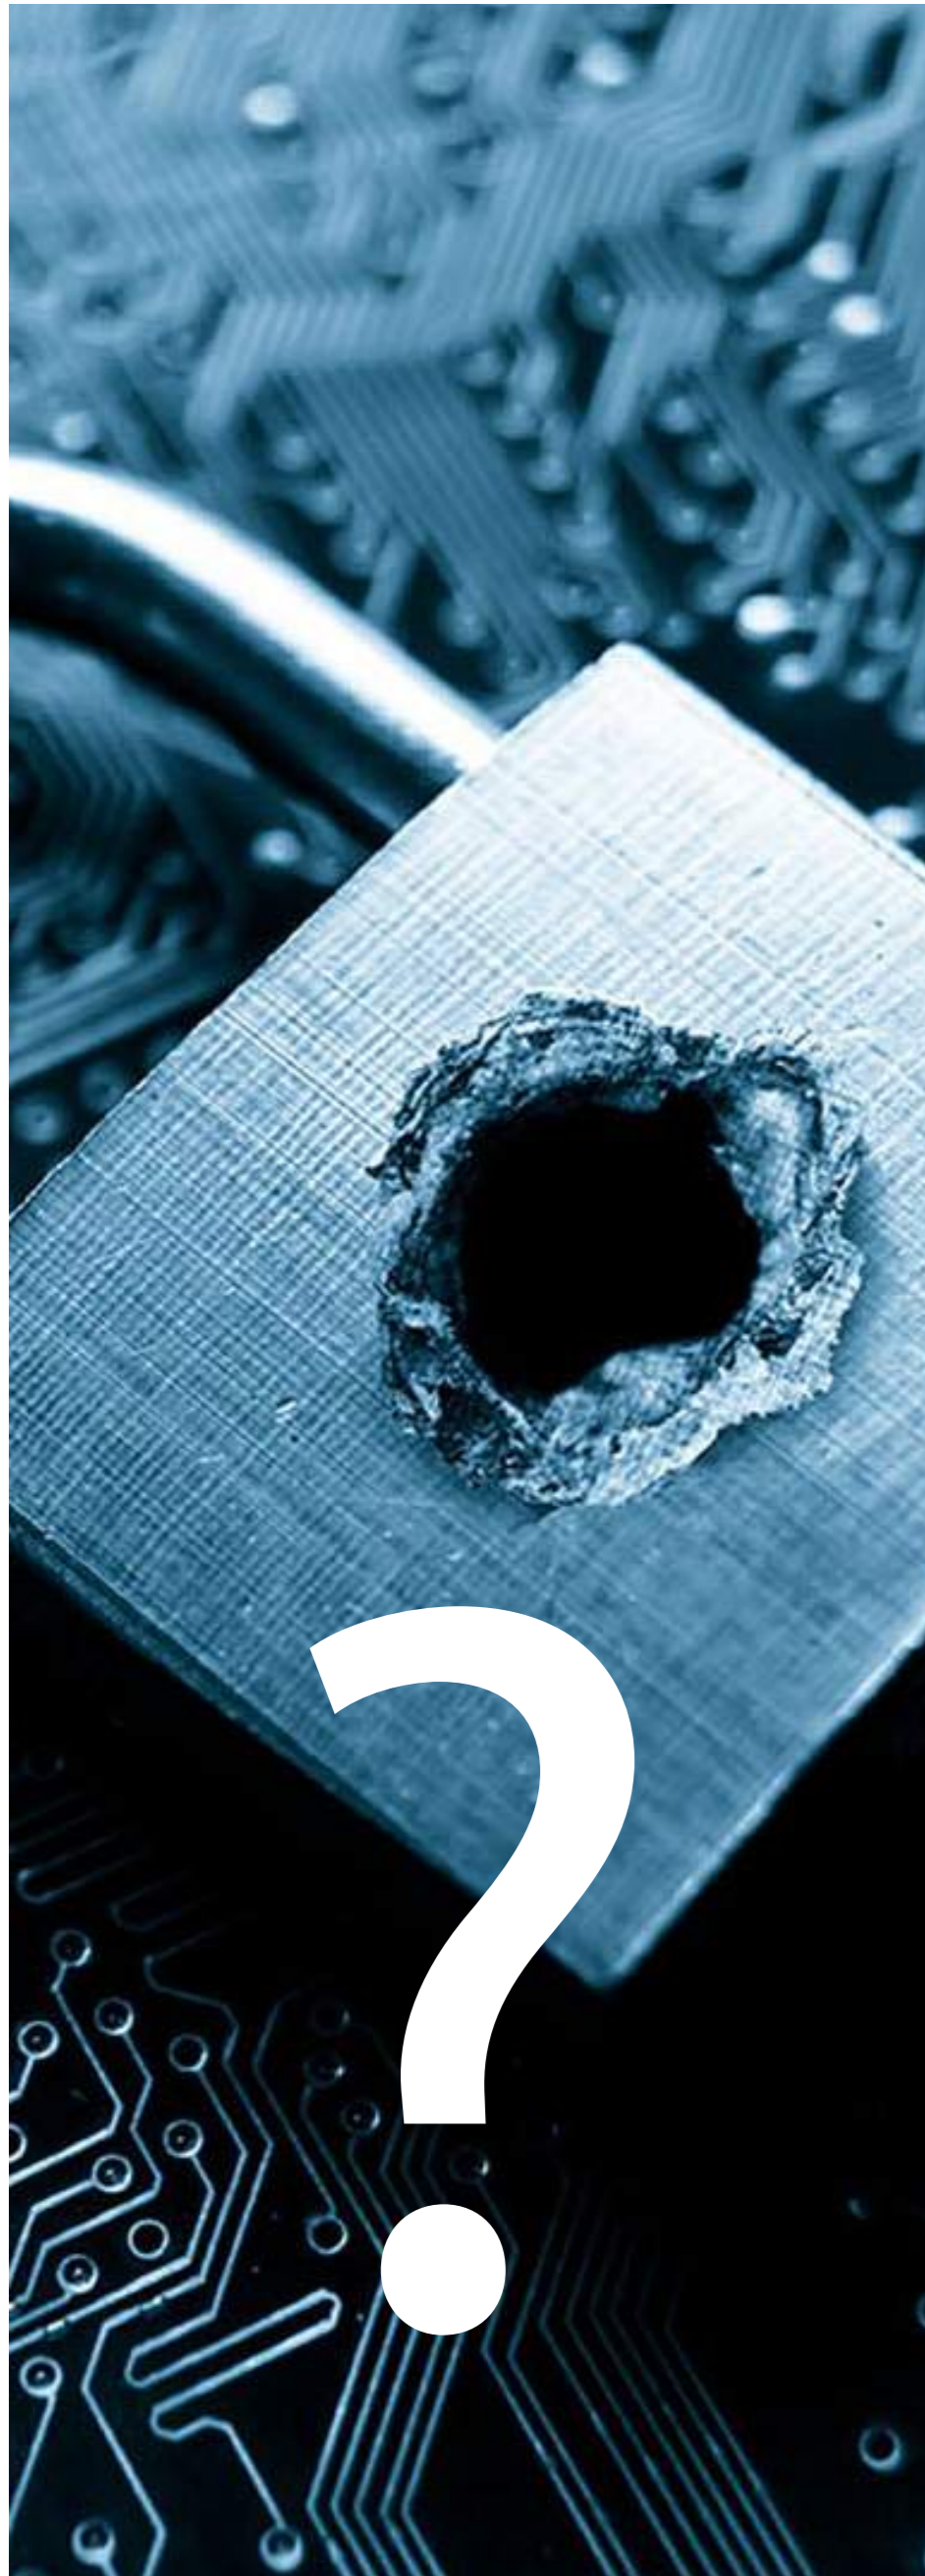

SSL scan

Personal info of the owner / admin

Targeted port, threads needed, screen shot for offline target

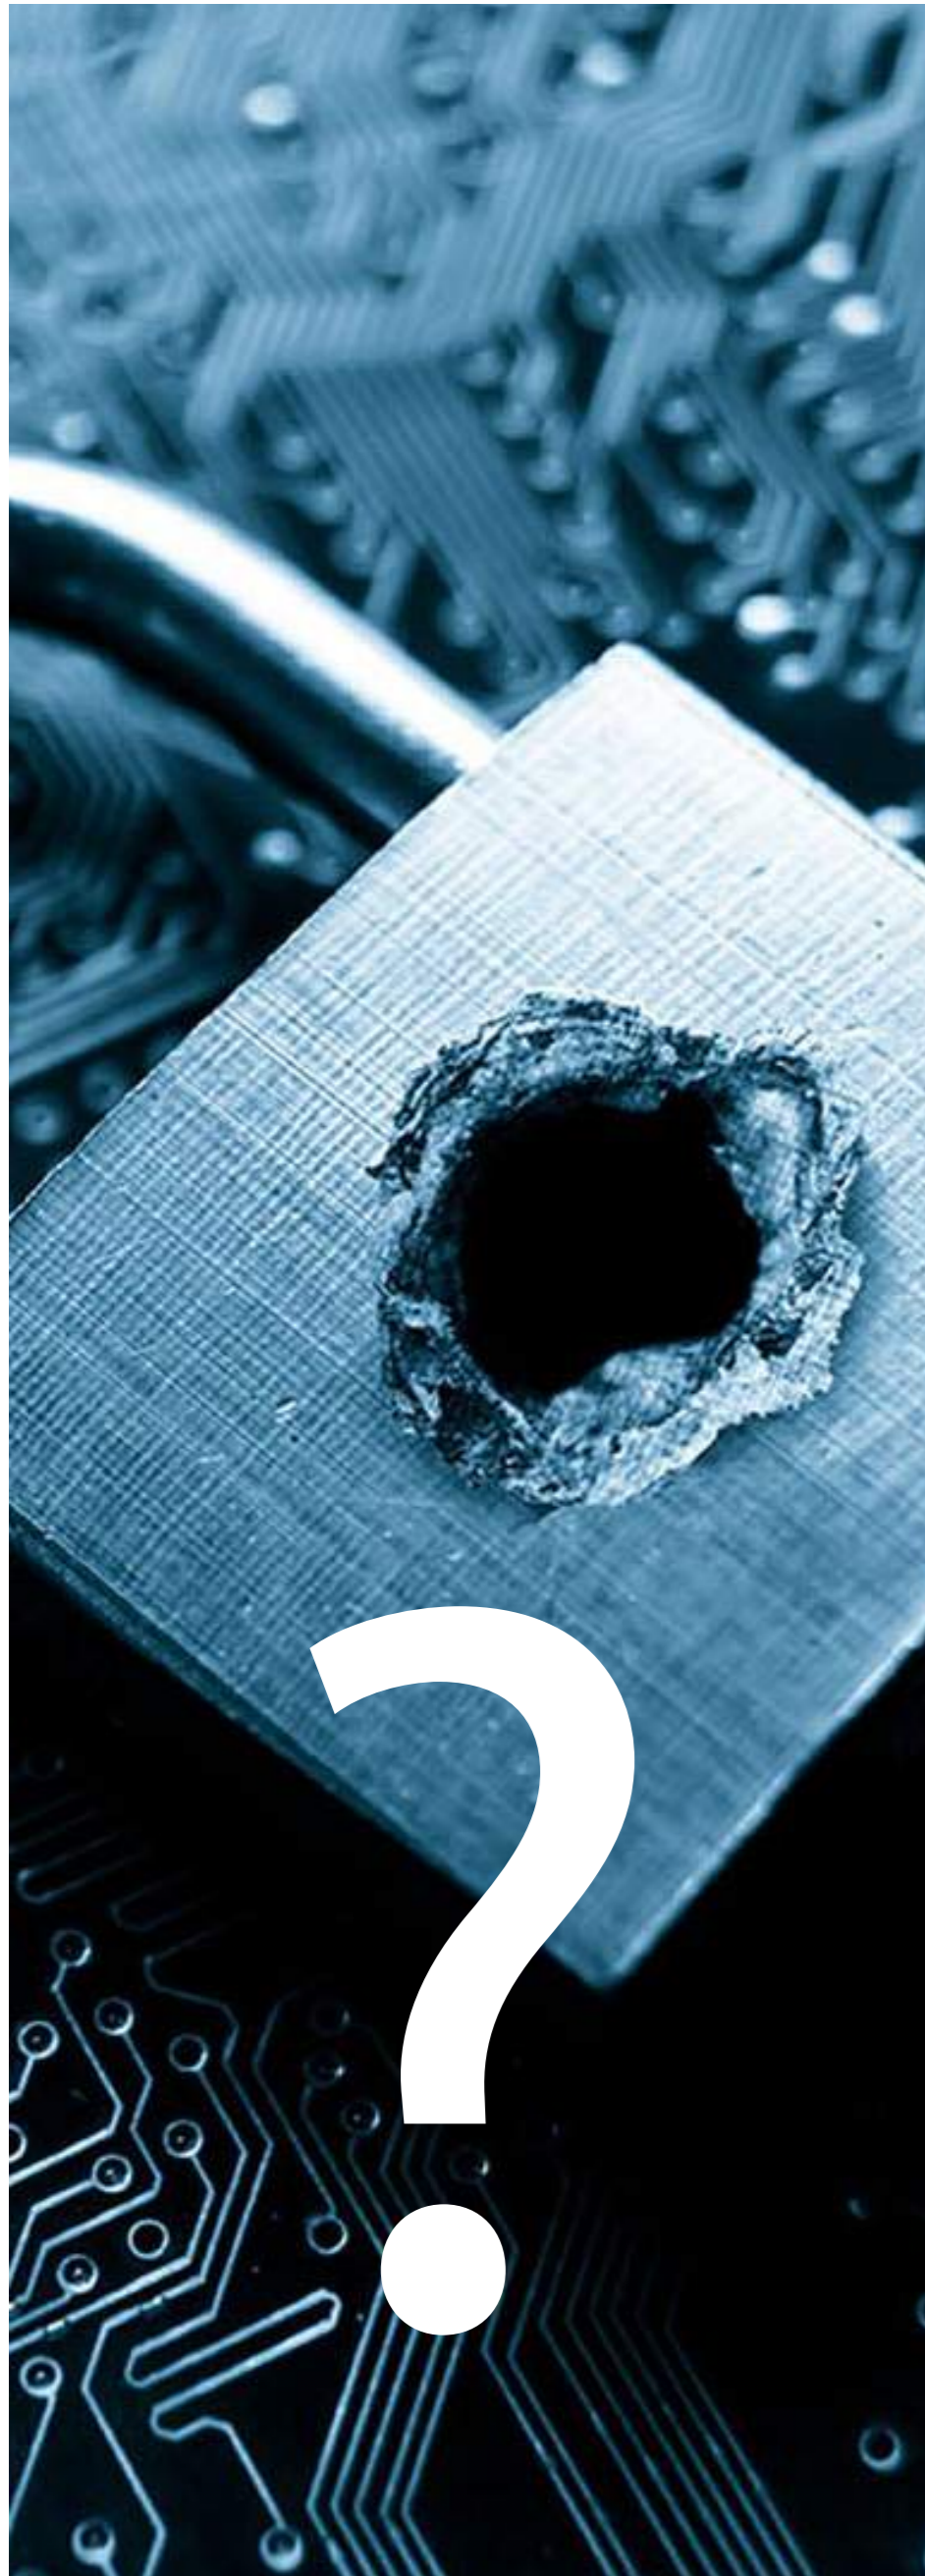

Report open ports + services used

SSL output + targeted port

FTP crack
Fake/Real IP detection
SQL injection
BSQL injection
XSS attack possible
Database leaked
Admin takeover
Admin panel
Shell injection
Hash Decryption
Dork errors
Brute force
Defacement
Cloning /phishing
Other hazarding weaknesses

Targeted IP + port + screenshot
In case of a fake IP, is the real IP detectable? + DCIP address
Vulnerable URL + Parameter (Get or post)
Vulnerable URL + Keyword
Vulnerable parameter
Is it possible? + DB names
Are admin credentials vulnerable?
Is admin login page public?
Writable directory on the server
Are credentials stored as plain text?
18.540 Dorks scan results
Targeted user / port / service
Is defacement possible?
Clone Target to harvest clients credentials + personal info
Miscellaneous

Manual SQL error detection
Proxychains attack
SQL user lockout
Unauthorized remote control
Unauthorized file upload
Authentication bypass

Vulnerable parameter
Vulnerable ports
Locked user
OS vulnerability
OS vulnerability
Vulnerable script
